Workshop Outline

School Disinfection Workshop

Duration: 3 Days

WORKSHOP DESCRIPTION:
This Online Orientation Manual is intended to support school teachers teaching at public and private schools at the current scenario of COVID-19. This orientation manual is developed by Environment and Public Health Organization (ENPHO) under the project of UNICEF and is specifically for the school setting of Nepal.

This online orientation is designed for sharing knowledge on disinfecting environmental surfaces at school as preventive measure or barrier to the transmission of COVID-19, especially for teachers and students. With the growing number of COVID cases, the schools are closed but in the verge of reopening sooner or later. And with the reopening, the chances or the risk for the transmission from the school setting itself is also soaring.

Disinfecting the common surfaces and high touch surfaces within the school premises are primarily highlighted in the package. To this, procedure of preparing chlorine disinfectant is also discussed in the package.

With the situation of physical distancing imposed by Government of Nepal, the orientation is developed for the virtual sharing making it interactive as much as possible. For this, taking voices from participants, writing their thoughts in chat box, breaking into rooms for small group discussions, using reaction, and polling are used in the package.

OBJECTIVES
The general objective of this orientation is to impart knowledge on disinfecting high touch surfaces in school and build skill on preparing chlorine solution to limit wider spread amongst the teachers and students and their family members.

PARTICIPANTS
The workshop is oriented towards the school teachers (either working in public or private schools). To this, this orientation is also targeted towards the officers and managers of different organizations who are working directly with school teachers in their respective educational institutions.

METHOD OF INSTRUCTION
This participatory style training includes theory, open discussions, group exercises, and practical sessions. Active participation of the participants in the learning activities is highly encouraged.
CONTENT

The following is the tentative list of topics to be covered during the training. A specific agenda will be developed and provided to the participants in consultation with the organizer and the participants’ needs.

- COVID-19 and Disinfection
- Route of COVID-19 Transmission
- Cleaning vs. Disinfection
- Why Disinfection
- Available Options for Disinfection
- Calculating the Amount of Disinfectants
- Things to Consider while Preparing Disinfectant
- Preparing 0.1% Chlorine Disinfectant
- Ways for Diluting Chlorine
- Disinfectant High touch surface in school
- Procedure of Cleaning and Disinfection
- Frequency of Cleaning and Disinfecting
