

# Method to Install RTI Toilet

First of all, please ensure that you have all above mentioned components needed for installation of RTI toilet.

## Step 1:

With the help of two assistants, erect the two frames with stand facing each other. The frames should be placed such that the door should be opened outside and the blue sheet should be outside.

## Step 2:

Tighten the left and right frames with the help of 12 nut bolts.

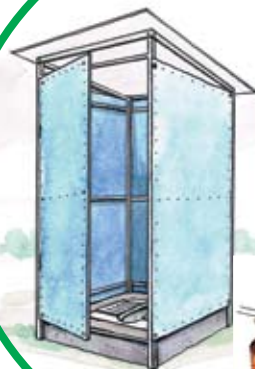

## Step 3:

Similarly, fix the roof with the help of 4 nut bolts.

## Step 7:

Finally, the toilet can be used by constructing one or two offset pit or a septic tank.

## Step 6:

Fix the pan and apply the cement plaster around the pan properly.

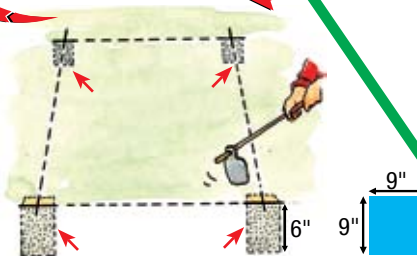

## Step 5:

Fit the stands in the holes and properly concrete them. While doing so, 6 inches of the stand should be above the ground.

## Step 4:

Dig 6 inch deep and 9 x 9 inches four holes in order to fix the four stands of the frames.
