

Who we are

Eco Concern Pvt. Ltd. (EcoConcern) is a government registered social enterprise specialized in designing and utilizing innovative solutions for safe water, sustainable sanitation and healthy environment. EcoConcern, as an *ecopreneur*, develops and sells environmentally friendly products and services.

Vision

Healthy and prospering communities practising sustainable WASH.

Mission

To collaboratively promote the delivery of safe water, sustainable sanitation and alternative energy that produce high quality and lasting benefits to consumers and communities.

We believe

Sustainable WASH (Water, Sanitation and Hygiene) is a key to sustaining human health, education and economic development and it is essential for the stability and development of communities and the world.

Focus areas

- **Safe Water:** Access to safe water is a basic human right.
- **Sustainable Sanitation:** Provision of lasting sanitation is a leading development priority.
- **Healthy Environment:** Clean environment is central to increasing quality and longevity of life.
- **Alternative Energy:** Use of environment friendly energy sources can mitigate global warming and climate change.

What we do

- **Laboratory services:** Comprehensive laboratory services for microbial, chemical and physical analysis of water, waste-water, soil, food and air.
- **Production of water treatment, sanitation and energy related products:** Production of products (e.g chlorine solutions and water filters), water testing kits for lab and field, devices related to alternative energy (biogas, solar, wind).
- **Consultancy services for innovative, eco-friendly and affordable solutions related to water, sanitation and alternative energy:** Consultancy services for design, dissemination and capacity building for promotion of innovative, ecological and environment friendly technology related to water utilities, water conservation, rain water harvesting, water storage, water recharge, waste management and energy generation and use at households, education and health institutions, office and corporate buildings.
- **Construction and management of innovative, eco-friendly solutions related to water treatment and sanitation systems:** Construction, operation and management of innovative and ecologically sustainable systems and plants including infrastructure for water treatment and ecological and environment friendly technology related to water conservation, rain water harvesting, water storage, water recharge, waste management and energy generation and use for households, education and health institutions, office and corporate buildings.
- **Trade, including import and export, of innovative, eco-friendly and affordable technology and products related to water, sanitation and energy:** Import, export, market and distribute products and systems for water treatment, water conservation, rain water harvesting, ground water recharge, household and institutional liquid and solid waste management and alternative energy for households, education and health institutions, office and corporate buildings.

Strategic research and development partner

Environment and Public Health Organization (ENPHO)

New Baneshwor, Kathmandu

Web: www.enpho.org

We look forward to

- Creating partnership to collaboratively promote delivery of safe water, sustainable sanitation and hygiene services that produce high quality and long lasting benefits to the people.
- Developing and implementing business models to scale up and scale out WASH and alternative energy products and services.

Serving communities with safe water, sustainable sanitation and healthy environment
