

Training on WASH & Climate Change

Climate change remains one of the most global issues, with wide-ranging impacts on public health, WASH: in services & infrastructure. The climate induced disaster threaten community health and slow the progress toward SDGs.

To effectively respond, urgent action is needed to identify and implement climate-responsive strategies on WASH sector, focusing on climate resilience.

This training aims to strengthen their ability to address climate-related WASH issues through practical, locally relevant, and policy-driven approaches.
